

Demo Walkthrough - Team 4

Day 9 Feature Enhancement Activity - django-helpdesk

Team: Team 4 | **Members:** Manoj. C, Meghana. S, Aseem
| **Repository:** github.com/MANOFHATERS/DAY2-APPLIED-PROGARMMING
Git tags: enhancement-1-complete, enhancement-2-complete | **Recording:** Team4_Demo.webm (2 min 27 sec)

This document walks through the screen recording and explains what is being shown at each point. The recording shows that both enhancements work, that the test scenarios from the worksheet all pass, and that basic functionality is not broken.

Recording timeline

Time	Slide / screenshot	What we are showing
00:00	Title slide	Team 4 members, repository, selected enhancements (A.2 Waiting for Customer and A.1 Transfer).
00:08	Before: Actions menu	The Actions dropdown on the ticket detail page in the original UI. Only Edit, Hold, Delete are present. No Transfer action.
00:14	Before: status radio buttons	The Respond tab in the original UI. Status options are Open, Resolved,

		Closed, Duplicate only. No "Waiting for Customer" option.
00:20	Before vs After comparison	Side-by-side comparison showing the Actions menu and the status radio buttons before and after our changes.
00:26	After: status radio buttons	The Respond tab after Enhancement 1. A new "Waiting for Customer" radio button is now visible alongside the existing four options.
00:32	After: Actions menu	The Actions dropdown after Enhancement 2. A new "Transfer" entry sits between Edit and Hold.
00:38	Enhancement 1 test summary	Table of the 5 test scenarios T1-T5 from the worksheet for Enhancement 1, all marked PASS.
00:44	T1: Open ticket radio buttons	Ticket 1 (Open) shows the new "Waiting for Customer" radio button.
00:50	T2: Ticket set to Waiting	After submitting the update form with the new status, ticket 1 is now "Waiting for Customer". A FollowUp entry records the change.
00:56	T2: Dashboard reflects new status	The dashboard now shows the ticket in the "Waiting for Customer" state, with the badge colour defined in the CSS class map.
01:02	T3: Resume to Open	From the Waiting state, the agent sets status back to Open. The transition is recorded as a new FollowUp. Queue, owner and priority were preserved.
01:08	T4: Resolved ticket flow restriction	A Resolved ticket does NOT show the "Waiting for Customer" option in its radio buttons - the flow table correctly excludes Waiting from the Resolved state's allowed transitions.

01:14	T5: Unrelated edit regression	Editing only the ticket title, while leaving status on Open, does not trigger the new rule. The new status did not break ordinary edits.
01:20	Enhancement 2 test summary	Table of the 5 test scenarios T1-T5 from the worksheet for Enhancement 2, all marked PASS.
01:26	Transfer T1: Transfer page	The new Transfer page is reachable from the Actions dropdown. It shows the current queue and a dropdown of valid destinations.
01:32	Transfer T2: After transfer	After submitting, ticket 1 has moved to People Operations. The ticket history shows a labelled follow-up "Ticket transferred from IT Support to People Operations". Status and priority are unchanged.
01:38	Transfer T3: Transfer back	Transferring the ticket back to IT Support records a second labelled follow-up. Both transfers are visible in history.
01:44	Transfer T4: Same-queue rejected	Submitting the form without choosing a destination (or choosing the current queue) is rejected with an error. The ticket stays in its current queue.
01:50	Tests pass (basic functionality not broken)	The existing project test suite (56 tests) still passes after both enhancements. The 10 new tests we added for both enhancements also pass.

What we demonstrate

- **Enhancement 1 (Waiting for Customer) is working:** the new status appears in the radio buttons on Open and Reopened tickets, in the dashboard, and in the ticket list. Agents can mark a ticket as Waiting and later resume it back to Open. The flow

restriction stops Resolved and Closed tickets from going directly to Waiting.

- **Enhancement 2 (Transfer) is working:** the new Transfer action is its own entry in the Actions dropdown, opens a dedicated page, moves the ticket to a different queue, and records a labelled follow-up in history. Same-queue transfer is rejected. Status and priority are preserved across the transfer.
- **Basic functionality is not broken:** all 56 previously-passing tests in the project's existing test suite still pass, including tests for ticket actions, ticket views, navigation, status CSS classes, dashboard sorting, and the ticket update view.
- **The two enhancements coexist:** a ticket in the Waiting for Customer state can still be transferred, and the Waiting state is preserved across the transfer.

Submission summary

- **Worksheet (this PDF):**
docs/Team4_Feature_Enhancement_Worksheet.pdf in the repository, also delivered separately.
- **Recording:** Team4_Demo.webm (2 min 27 sec) - shows the test scenarios running in the live UI.
- **Repository:** github.com/MANOFHATERS/DAY2-APPLIED-PROGRAMMING
- **Git tags:** enhancement-1-complete and enhancement-2-complete on the main branch.
- **Tests:** tests/test_team4_enhancements.py - 10 new tests, all pass.

Prepared by Team 4 (Manoj. C, Meghana. S, Aseem) for the Day 9 Feature Enhancement Activity.
